

## Product Bulletin: Couvrette First Lane Surround

### *Ideal Solution for Replacing Teller Windows*

Couvrette Building Systems' First Lane Surround offers the perfect solution for financial institutions looking to replace teller windows with a drive-up ATM. As financial institutions upgrade their facilities to incorporate remote teller systems and remove the teller window and deal drawer, they need a solution to make use of the existing drive-through lane. The First Lane surround allows this lane to be completely utilized with little or no disruption to the site during installation. The surround is constructed from sturdy steel or aluminum and can be finished in custom automotive quality paint or with other exteriors to match existing architectural themes. The through-the-wall installation allows the ATM to be serviced from within the bank for additional security. Optional backlit signcan and down lighting bring added visibility to the ATM, making it a transaction magnet.

Couvrette specializes in custom solutions, and full turnkey service is available for a First Lane Surround application. Couvrette works with the customer to develop the site plan and prepare the site for installation. The First Lane Surround is custom designed for each site location, allowing a perfect fit for any size wall opening, setback requirement or curb limitation. However, the surround is built using state-of-the-art manufacturing and assembly processes that keep the price comparable to that of mass producing standard products. This results in a combination of superior fit and finish at a reasonable cost. Custom finishes, paint, and corporate branding allow the financial institution to make the transition as seamless as possible.
