

Couvrette's Mobile ATM travels to any site location, providing a full-function ATM wherever it is needed. The Mobile ATM is powered using a 5500W propane generator when electrical service is not available at the site. Local electrical and data lines may also be used. In the event that data lines are not working due to weather or other circumstances, the Mobile ATM may use a customer-supplied wireless data system. Ideal for disaster recovery plans, sporting events, street festivals and other remote gatherings, Couvrette's Mobile ATM converts from a trailer to a full function ATM kiosk with integrated canopy. The system uses a four point electronic leveling system, and the retractable axle allows the kiosk to sit directly on the ground. Steel construction with an insulated ATM climate-controlled interior offers long life for the kiosk and ATM.

The Mobile ATM Kiosk may be towed using any truck with a 7,000 lb. towing capacity and a standard towing hitch.

The Jack Stands are lowered using the remote control until all four jacks are touching the ground.

The Mobile Kiosk jacks are in place and the towing vehicle is unhooked. Now the towing tongue is ready to be stowed in its locking compartment.

The towing tongue folds up into its locking cabinet.

# Mobile Kiosk

Once the towing tongue is secured and locked into its cabinet, the Mobile Kiosk may be lowered to the ground using the remote controlled jacks. The kiosk should be lowered gradually, one end at a time, in order to keep the unit stable.

Before lowering the Mobile Kiosk, move the axle pins into the unlocked position as shown. This allows the wheels to fit up inside the Mobile Kiosk.

View of the Mobile Kiosk as it lowers to the ground and into the operational position.
