

Product Bulletin: Couvrette Deploys the First Mobile ATMs

Ideal for Disaster Recovery Plans

Couvrette Building Systems is now shipping our Mobile ATM Kiosks, bringing to the market the first of its kind in mobile ATM transport and deployment. The unique design allows financial institutions to implement a full function ATM installation anywhere it is needed. The Mobile ATM is powered using a 5500W propane generator, and requires no electricity, making it an ideal solution for disaster recovery plans, street festivals, sporting events, new bank construction, etc. The Mobile ATM can also connect to local electrical and data lines when they are available. In the event local data lines are down, the ATM can accommodate customer-supplied wireless systems for communication between the data network and the Mobile ATM.

The design of the Mobile ATM incorporates a rugged trailer with 16" heavy duty wheels that holds a 13' x 7' x 93" kiosk. The kiosk uses a four point electronic leveling system and hydraulics to convert the unit from the transport configuration to the operational position. A retractable axle allows the Mobile ATM Kiosk to be positioned at grade level, placing the ATM within ADA operating guidelines. The Mobile ATM kiosk includes an integrated canopy with an 87.5" clearance that protects both the ATM and customers from inclement weather. A marketing area is also included, allowing the financial institution to increase branding and visibility for the installation. The propane generator and two NFPA 58 D.O.T. approved propane tanks are accessed through rear doors, and the ATM area includes a room for equipment and supply storage. The overall towing weight is only 7,000 lbs, and the kiosk/canopy set up in minutes. The Couvrette Mobile ATM brings remote banking to its highest level of quality and service, providing complete flexibility in any installation scenario.
